EDUCATION

The University of Texas at Austin

Austin, TX

Bachelor of Science in Computer Science, Minor in Business | GPA: 3.70

May 2025

Relevant Coursework: Data Structures, Algorithms, Computer Arch, Operating Systems, Networks, Game Theory, Statistics, Machine Learning, Object Oriented Programming, Programming for Performance

Activities: Texas Energy, UTPC, Trading, Catan, Poker, Basketball

EXPERIENCE

Meta - Software Engineer, NYC

Aug 2025 - Present

- Built an AI agent, powered by custom MCP tooling supporting full read/write flows for compliance primitives, to automate change management workflows for the RCM platform, cutting average time to create change requests from 3 days to 1.2 days and now **powering 70% of all change requests**
- Designed the agent's memory system by distilling past conversations into reusable skills, and developed the evaluation infrastructure used to measure and improve agent performance, **reducing negative agent conversations by 45%**
- Built a framework to automatically run preflight checks on compliance requirements at creation time, **decreasing requirement-creation issues by 30%** and helping avoid merge conflicts on the compliance graph
- Developed an internal dashboard using React and GraphQL to surface information and compliance primitive objects, reducing time spent reviewing compliance requirements by 66%
- Designed and built a CLI interface for compliance primitives giving engineers direct read/write access to compliance data without navigating internal UIs

York Space Systems - C++ Infrastructure Intern; Austin, TX

Sep 2024 - Dec 2024

- Designed and implemented a C++ interface for halo thruster control, integrating with the satellite's altitude control system to enable real-time positional adjustments through the CAN protocol

J.P. Morgan Chase - Software Engineer Intern

Payments Team (Austin, TX)

June 2024 - Aug 2024

- Created a Python service that handles data ingestion and processing from a variety of data stores which reduced the processing time of ~80 GBs of daily ACH records by 60% and removed a third party dependency
- Engineered an automatic alerting system which handled discrepancies between internal and external records of client transactions utilizing Kafka, reducing incident tickets by 20%
- Converted 5+ REST APIs to gRPC optimizing response times to clients for transaction details by 40%

Securities Services Team (Plano, TX)

June 2023 - Aug 2023

- Architected and developed a secure (Kerberos and OAuth) full stack app in Angular and SpringBoot that monitors market data trends for ~5M entries, saving 30 minutes daily for security traders
- Reduced build times for team repositories by 15% by deploying Gradle Enterprise on Jules

Freetail Hackers - Technical Lead - Merge

Jan 2023 - Aug 2024

- Built a Tinder-like matchmaking service for hackathons and deployed at HackTX, LaHacks, and RowdyHacks
- Implemented real-time multi-user chat functionality using Socket.IO for matched hackers and teams
- Introduced DevOps by setting up a CI/CD pipeline, unit testing (Jest), and pre-commit hooks

Research Initiative at UT Austin - Autonomous Robots Research Assistant

Jan 2022 - Dec 2022

- Constructed a machine learning model that can predict where a person points using OpenPose, C++, ROS
- Programmed Face-ID, navigation, and depth estimation systems with ROS to allow a robot to identify individuals and lead them from source to destination using Tensorflow, OpenCV, and Pandas
- Improved a conflict-based search algorithm to succeed with constrained environments and social forces

SKILLS

Languages: Java, Python, C, C++, PHP (Hack), JavaScript, Typescript, HTML, CSS, SQL, Go, Ruby

Frameworks/Tools: Spring Boot, React, Angular, AWS, Node, Django, Git, Docker, Kubernetes, PostgreSQL, MongoDB

Concepts: Backend, Frontend, Cloud Computing, System Design, RDBMS, NoSQL, Fintech, TCP/UDP, Linux, Agent, AI
